Devoteam

Dear Hiring Manager,

I am applying for Devoteam's Trainee job. I'm a recent graduate from the AI & Data Science program at Zarqa University with a very good GPA: 3.34, and so I want to join an organization where I can apply what I learned in theory to real-life problems. I was impressed with Devoteam's emphasis on mentorship, continuous learning, and leveraging technology to create positive change and knew that was just the kind of environment I was looking for to begin my career in.

My method of learning was most of the time practical during my entire course. I've always been motivated to really get under the hood and understand what goes on. However, it was a great prodding for me to approach problems like that of a machine learning framework or an advanced data structure from the ground up in C and C++ rather than using some pre-existing readymade library. It required lots of patience, testing, and trial and error, but it helped me to have a sound understanding of core programming logic and debugging. I also maintain my skills by doing some algorithmic logic regularly; I have solved more than 100 algorithmic problems on the LeetCode and Codeforces sites.

I'm happy with my knowledge, such as Python and Linux, although I know I have a lot of learning left to do in the professional tech industry. To me, one of the best parts of Devoteam's training program is the opportunity for me to learn from experts, gain insight into industry best practices, and be a part of a team. I have very good communication skills, I am very good in English.

Sincerely,

Issa Aljariri
